QUICK SETUP GUIDE

AQUA TRACKA
BY VAT WATERING

1 Switch it on

Plug in the power and press the rocker switch.

Water flows as normal while the unit starts up. The lights on the box show which limit is chosen.

2 Choose a limit

Press the button on the box, or A, B or C on the remote.

One light means 25 L, 50 L or 100 L. No lights means free flow: the water is counted but never stopped.

3 Use your water

When the limit is reached, the valve pulses shut 4 times.

That is your warning. Water keeps flowing and the count starts again from 0 L, ready for the next round.

See it on your phone (optional)

1. Join Wi-Fi: VAT_Aqua_Tracka (no password)
2. Open: http://192.168.4.1 (type the http://)

See your live water count, change the limit and change settings. If the phone says 'no internet', choose to stay connected.

Other features

- **Reset the count.**
  Hold any remote button for 2 seconds. The valve clicks twice to confirm. Your chosen limit stays the same, only the count goes back to 0 L.
- **Reading the lights.**
  One light is your limit. Blinking with the valve means the limit was reached. A slow blink means the valve is held shut until you reset the count.
- **After a power cut.**
  Your limit, settings and calibration are remembered, and the count restarts at 0 L. A normally open valve lets water through while the power is off.
